

# Exploring compute services : Lambda

Questions	Notes
aws Lambda	<ul style="list-style-type: none"> <li>• Lambda is a serverless compute service that lets you run code without managing servers</li> <li>• you author application code, called functions, using many popular languages</li> <li>• scales automatically</li> <li>• serverless means you don't worry about managing servers like with EC2.</li> <li>• lambda allows developers to focus on the core business logic for the apps they're developing instead of worrying about managing servers, patching, provisioning and scaling.</li> </ul>
Lambda in the real world	<ul style="list-style-type: none"> <li>• Lambda is a building block for many serverless applications</li> <li>• serverless simply means AWS manages the servers for you and you cannot access them. YOU CAN PRETEND they don't exist <ul style="list-style-type: none"> <li>◦ real-time file processing:  <pre> graph LR     A[Data File CSV] -- Upload --&gt; B[S3 Bucket]     B -- Trigger --&gt; C[Lambda Function]     C -- Store Data --&gt; D[DynamoDB Table] </pre> </li> <li>◦ sending email notifications  <pre> graph LR     subgraph AWS_Cloud [AWS Cloud]         A[CodeCommit] --&gt; B[CloudWatch]         B --&gt; C[Lambda]         C --&gt; D[SNS]     end     D --&gt; E[Email] </pre> </li> <li>◦ backend business logic  <pre> graph LR     Client(( )) --&gt; A[Alexa Skill]     subgraph AWS_Cloud [AWS Cloud]         A &lt;--&gt; B[Lambda]         B &lt;--&gt; C[DynamoDB]     end </pre> </li> </ul> </li> </ul>
Features	<ol style="list-style-type: none"> <li>1. supports popular programming languages like Java, Go, PowerShell, Node.js, C#, Python and Ruby</li> <li>2. you author code using your favorite development environment or via the console</li> <li>3. Lambda can execute your code in response to events</li> <li>4. Lambda functions have a 15-minute time-out.</li> </ol>

starts execution .Test invokes on the console count as well.

4. always free: the free usage tier includes 1 million free requests each month

## Résumé

- your responsibility: you are only responsible for your application [code.aws](https://aws.amazon.com/code/) manages servers, coding environment , and language support
- always free: even after the free-usage tier expires, you will have access to 1 million free lambda calls each month.
